Procedure Repair Influence

I have enabled a way to repair the procedures so you can keep using them. One of the most common ways you can repair a procedure is using thought with thinking automatically throughout actions and directing this where automatically required. The light language can be added automatically for programming absolutely can be done by imagining a shape repeating automatically.

This is the new formula that can be applied for depression and negative symptoms of schizophrenia. See the below example for the most recent procedure I have done and updated since the last torrent. See the other pages too for more examples however my favorite because you do not have to physically do the actions with hands but that can be interesting if you are excited too.
